Abstract

This study report throws light on the reasons behind customer's decision of choosing Pantaloons for purchase of Apparels and various other products from Pantaloons. It also describes the satisfaction of customer and their attitude towards various touch points in the Store. The work was accomplished at Pantaloons store, for conducting survey and fulfillment of Questionnaires. A sample size of 100 was selected & research was conducted. Among those who were interviewed consist of housewives, professionals, and even college going students. Though the sample size considered was small but it was so varied in order to overcome all the odds. Convenience sampling method was considered to be best suited to fulfill the study Report. A structured questionnaire was constructed in order to measure the responses of Respondents on suitable scale so that they can be analyzed on SPSS. Primary data collection was done through questionnaire and interviews and secondary data collection through company websites and various previous research reports. Through survey effect of various factors like ambience of store, low prices and convenience which is also known as customer's touch point came in light and the reason of people choosing Pantaloons over other retail outlets became clear. These surveys can provide management with the information they need to determine their customer's level of satisfaction with their products and with the services associated with those products. Employees and the management of the store can use the survey information to identify opportunities for ongoing process improvements and to monitor the impact of those improvements. Respondents gave many suggestions for Pantaloons like they should have more Staff especially during Sales, more Sitting area, more variety, etc.

Keywords: pantaloons, customer service, consumers response

1. Introduction

In India, organized retailing, is contributing 4.6% of total retail sector and is still evolving. However, it is expected to increase to 16%, by 2013. Retail sector forms 13-14% of GDP. It is alluring in terms of investment, employment opportunity, and usage of technology. Retailing is in a rapid state of change due to speedy technological developments, changing competitive positions, varying consumer behavior as well as their expectations and liberalized regulatory environment. In such a scenario, information is crucial to plan and control profitable retail businesses and it can be an important source of competitive advantage so long as it is affordable and readily available. The survey was distributed to all customers of the Store. The objective of this research is to identify the variability of customer satisfaction and the shopping experience in PANTALOONS. In addition the survey can be used in the future for evaluation of customer satisfaction at the distribution company. It was concluded that the customers were generally satisfied & their shopping experience with pantaloons was good. A customer is defined as an establishment that receives merchandise from the store. The customer also receives services. A service, as defined by the proposed research could be aid in stocking, promotions for

the establishment, the delivery itself, other assistance or goods provided by sales representatives and/or delivery personnel to the customer. Another form of service is the assistance the customer receives while at the distribution company. This can be in form of support by the staff, timeliness of response to needs and questions and many other forms that will be addressed.

2. Objectives of the study

1. To study consumer attitude toward pantaloons.
2. To measure the satisfaction level of overall shopping experience of customers at pantaloons

3. Materials and Methods

Research methodology

It is necessary to adopt a particular method to complete a project successfully. The steps that have been taken to complete this project are as follows:

1. **Research Design:** Depending upon the objectives of the research the most suitable marketing research design is "Exploratory research". The purpose is to find out the experience of customers and consumer while shopping in pantaloons.

2. **Data Collection:** The information used in this project was through primary sources i.e. personally interacting the customers in the outlet and getting the first hand information and secondary Sources i.e. Personal interview and observation.
3. **Sample Area:** Pantaloons retail India ltd outlet in Allahabad.
4. **Sample Size:** 100 customers
5. **Analyzing the collected data and reporting the finding:** finally the data has been collected was thoroughly analyzed and processed to obtain the required information. The data has been summarized in the form of graphs.
6. **Research Approach:** the approach adopted to complete this project was that of Customer Services and Consumer Response and the study secondary data is collected from various newspapers, internet, and books. The survey was done in Pantaloons retail India store Allahabad.
7. **Research Instrument:** The instrument that was chosen to conduct the market research was that of “structured questionnaire”. This has been done because data obtained in in structured studies are easier to tabulated and interpret then data gathered in other ways. A list of questionnaire was prepared which could give relevant information when answered by the respondents.

4. Results and Discussions

1. Age of the respondents

The first criteria respondents were asked to indicate was the age group they belonged to. Respondents were asked to choose among four age group categories. The age groups were identified as key factors impacting shopping and purchase

3. Buying status of Most Apparels

Table 1: Buying status of most of your apparels

S. No	Buy most of your Apparels	No. of Respondents	% of Respond
1	Nearby shops	38	38%

Total		100	100%

Interpretation

In the above table, we can clearly see that 60% of respondents for yes, 22% of respondents for certainly, 12% of respondents for maybe, 6% of respondents for no.

5. Conclusion

As the data gathered through questionnaire suggests that the maximum number of customers fall between the age group of 20-35. The percentage in terms of number of customers that fall in 20-35 is 65%.As the Indian customers have different mindset. And they have the tendency to spent little and get more. And they always expect Value for there every penny. And Pantaloons in that context fulfil there all their expectations. Now there are 25% of the customer’s falls in between 35-50. Therefore information suggests that the customers mainly fall between 20-50 year age group and that constitute 80% of the total sample size. 40% of the customer believes that Pantaloons has their own branded products to offer to the customers within a good price range. 80% of the sample size believe that they get good variety and product range. 55% of the sample size believes pricing is good enough to come again. 70% of the sample size has had good experience with CCA. 10% responded that they have not had satisfying experience with CCA’s. 75% of the sample sizes have said that their billing experience has been excellent. 8% responded that their billing experience had bad experience. 95% have said that their experience has been good and to 5% of the sample size this has been satisfactory.
